8 Elizabeth Lane, Hingham, MA

Project Narrative:

The project at 8 Elizabeth Lane is the construction of a new custom home on an existing site which previously contained a single-family dwelling. Sitework includes tying existing grading of the minimally sloped site to the new structure. The existing driveway access and septic system are to be retained. The drive will be resurfaced, and septic system recertified. Landscape work will include mitigation planting, screening, and understory planting along the property boundaries, as well as ornamental foundation planting. The new 2 ½ story home and landscape will be professionally designed to meet the needs of a family.
