Subject: HAHT Engineering Activities Parcels 97-0-9, 211 Hobart St. & 97-0-8 213 Hobart St.

Good morning Jennifer,

We are responding to the notice received Nov. 14, 2024(dated Nov 7, 2024) from the Board of Appeals regarding the parcels noted above.

We have reached out to our neighbors who also abut the parcels as well others in the neighborhood. There is a concern that there seems to be a rush to push this project through during the time of a drought where drier samples are expected to be received. I had mentioned to Mr. McSweeney when I talked to him in the initial phase that it would be best if this testing was done in the spring during a rainy May or June to see how much water flows through both lots.

We also want to mention that the lots are located in the area where the Turtle Crossing sign is posted due to turtle migration from the lot areas to the Bouve Pond and wonder what impact your project will have on them as well as Bouve Pond located directly across the street?

We request this concern be documented in the file with the testing if you go forward.

We look forward to your response.

Sincerely,
Jack and Natalie Whittemore
