Re: Project Narrative

The project will consist of the removal of approximately 180 sq ft of existing concrete pool patio/surround. The material will be removed with a mini excavator and taken off site for disposal. We will then bring in and spread loam where the surround had been and plant grass seed.

Additionally, we will remove approximately 480 sq ft of existing paved driveway with a mini excavator and take off site for disposal. We will then spread crushed stone as the new driveway material where the asphalt was removed.
